

# Communication is Critical

TO YOUR BUSINESS SECURITY SYSTEM

## LOCALLY OWNED AND OPERATED

Premier Security Solutions for Commercial,  
Industrial and Government Facilities

Technical Systems, Inc. offers over 50 years of combined experience in security systems design, installation, integration and monitoring, with the ability to handle projects from \$5,000 to \$5 million. Our expertise assures our customers that the systems we install and project manage will be completed in a professional, efficient and timely manner.

COMMERCIAL • INDUSTRIAL •  
GOVERNMENT

**constantly connected** Today we are connected in ways that would have been hard to imagine just a few years ago. No matter where you are, you can interact with others via a variety of communication platforms from an unlimited number of sources.

Security system manufacturers have eagerly adopted these platforms and incorporated them into their technology. By taking advantage of Cellular, Network, and other communication links, they are able to provide business owners with increased security, added convenience, and a constantly growing list of useful features.

**commercial solutions** Effective commercial security systems must be smart, flexible, and adaptable. Smart to provide a combination of intrusion, fire, access control – flexible in monitoring options and adaptable to build on future technology.

## your 24/7 sentry – always on duty

Smart business owners create a vastly increased level of security by having their system monitored. When there's an alarm, the system automatically alerts our monitoring station so we can instantly dispatch appropriate emergency responders.

**communication options** When selecting your security system, one of the most important considerations is availability of needed communication links, and the flexibility to add or select different links in the future.

You have three options for connecting your system to our monitoring center.

**DIAL-UP PHONE LINES** were once the only way to connect to a monitoring center, but Dial-up is probably the least secure communication link because phone lines may be downed by weather or cut by intruders.

**NETWORK** (Internet) connections provide much higher communication speeds than dial-up and enable a range of new features. A Network connection lets you remotely access your system and receive alerts/alarms via email.

**CELLULAR** is emerging as the most reliable and capable connection. Your Cellular connection can't be accidentally or intentionally cut, and Cellular opens the door to an incredible assortment of mobile security features.

**total mobile control** Include a cellular connection for your security system, and you open the door to many options for mobile control.

**MyAccess™** lets you send commands to your system via simple text messages, making any text-capable phone or device a remote control for your system.

The **Virtual Keypad app\*** works on your smart phone or mobile device. Download the app, and you can access all of the most commonly used security system functions via an attractive graphic interface.

\* Available for devices using Apple® or Android™ operating systems.

**control your business** A cellular connection to your security system also makes it possible to add a variety of remote control features. Add the optional Z-Wave® interface and inexpensive control devices, and you can use your smart phone or mobile device to:

- Remotely turn lights, signs, electronic equipment, and other plug-in devices on or off.
- Adjust thermostats, so you can set the temperature back while closed and then adjust it to a comfortable temperature while you are on the way to work ... a real energy saver.
- Lock or unlock doors, so you can let employees or service people in.
- Automatically lock doors when you arm your system.
- Automatically turn on lights when system has been activated.

With a cellular connection you can control your security system remotely, as well as control other devices such as locks, lights, thermostats, and cameras

**remote video access** Use the App to remotely access up to six interior and exterior wireless video cameras. Check in on employees or visually confirm the situation when you receive an alert. Remotely view and record images from any camera using your phone or mobile device.

## features to protect and manage your business

- Combine burglary and fire protection with access control in a single system.
- Choose cellular and network communication options for added benefits.
- Know what's happening at your business with alerts when staff arrive and leave, and reports of traffic counts and early to open/late close.
- Easy operation ensures your system will be used by employees with fewer false alarms.

**Graphic Touchscreen** keypad with scrollable menu. Allows you to control locks, lights and thermostats when connected to your alarm system.

Keypad lighting illuminates red during an alarm, and remains red, so you can instantly see that an alarm has occurred while you were out.
